Contents	Easi-Flow pump & container unit with hose, 7" paint roller assembly, accessory handle, large paint pad, small paint pad, large corner brush, small corner brush, funnel cup, tap adapter, cleaning clip. ★

self powered

- Simple pump action
- Easy to use / Easy to clean
- Tray-free use - keep painting
- Totally portable
- Belt-Clip reservoir
- Interchangeable heads
- Roller / Pads / Brushes

★  
**Easi-Flow™ Painter**

## description

The amazing new *Ventus Easi-Flow™* Paint System is a complete solution for all your painting needs. The lightweight hand-powered Easi-Flow™ Pump is worn on a belt clip and provides totally mobile, continuous paint-feed to the desired attachments. No more visits to the paint tray!

Here's the key points:-

- Pump contains nearly a litre (enough to paint several walls non-stop!)
- Wastes less paint than conventional methods
- Powered by you! (no batteries or external power required).
- Superb Quick-Change supply-tube enables fast and simple inter-change of all attachments
- Attachments included: Universal handle with comfort grip, 7" velvety flock Roller, two sizes of advanced flock Paint Pads, two sizes of velvety flock Corner Brushes
- Tap Adapter provides simple, water efficient, back-flush cleanup at the end of the job (always a nightmare with other painting solutions!)

Unlike other pump-based painting systems, Easi-Flow™ does NOT store paint in the handle, or head, so the painting action feels no different (and no heavier!) than a normal roller / brush / pad. The weight of 0.9 litres of paint is instead carried virtually unnoticed on a simple belt-clip. This system also keeps the paint sealed until it reaches the attachment, reducing the potential for mess, and prolonging your painting session with ease, whilst reducing the paint and water wastage associated with trays and frequent cleanups.

The attachments can, of course, be rinsed and reused many times - but spare attachments are readily available individually too!

Ventus take a responsible attitude to the environment, and this is carried through in the product packaging which is eye-catching and innovative, but substantially formed from recycled materials, and is totally recyclable.
